Chan, Christina To:

Subject: Rush search request for 09/767215

Please search in commercial database and in issued patent files:

1) Oligomer search for SEQ ID NO:2.

2) Amino acids 10-116, 126-420, 568-660, 676-745, 826-1004 of SEQ ID NO:2.

Thank you.

MINH TAM DAVIS

                                                                  The present sequence is human caspase recruitment domain-14 (CARD-14). The CARD-14 gene is located on chromosome 17. The CARD-14 is used for the detection of modulators that modulates the ability of CARD-14 to bind to Bci-10 and stimulates phosphorylation of Bci-10 or activation of nuclear factor-kappa B (NF-kB). The CARD-14 is useful for regulating growth and cell death and useful for the treatment of cancer. It is also useful for the treatment of cancer. It is also useful for the treatment of autoimmune disorders (e.g., systemic lupus erythematosus), neurological disorders e.g., Alzheimer's and Parkinson's disease, inflammatory disorders, haematological disorders strokes, immune disorders (e.g., cyndromes), myocardial infarctions, strokes, immune disorders (e.g., cyndromes).
regulating growth and cell death and useful for the treatment of cancer

The CARD-14 gene is located on chromosome 17. The CARD-14 is used for the detection of modulators that modulates the ability of CARD-14 to bind to Bcl-10 and stimulates phosphorylation of Bcl-10 or activation of nuclear factor kappa B (NF-kB). The CARD-14 is useful for regulating growth and cell death and useful for the treatment of cancer. It is also useful for the treatment of autolimnum disorders (e.g.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      An isolated caspase recruitment domain polypeptide useful for regulating growth and cell death and useful for the treatment of cancer

The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, foremaics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention describes novel polypeptides and their encoding nucleic acids derived from human pancreatic tumor tissue which have cytostatic activity. The sequences are also useful in producing pharmaceutical compositions for treatment of pancreatic tumors. AAY73814-Y74252 represent protein fragments encoded by the human pancreatic tumor CDNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           detecting and remediating formaldehyde. A claimed method for oxidizing formaldehyde in a sample involves: (1) providing R. sphaeroides cells that comprise a glutathione-dependent formaldehyde dehydrogense (GSH-FDH) gene, especially the R. sphaeroides adhl gene (see AAF90615), an adhl promoter operably linked to the GSH-FDH gene, a cis-acting operator, at least 1 protein that senses formaldehyde (especially Gfds and GfdT), and a protein that senses formaldehyde (especially Gfds and GfdT), and a trans-acting regulatory protein (especially GfdR) that modulates trans-acting regulatory protein (especially GfdR) that modulates formaldehyde sensor protein(s), such that the promoter and operator together specifically direct transcription of the GSH-FDH gene in response to a signal from the together specifically direct transcription of the GSH-FDH gene when the cell is exposed to formaldehyde; (2) adding the bacterial cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gidr encoded by an open reading from of the formaldehyde-inducible regulatory system (see AAF90616) of Rhodobacter sphaeroides. Hydropathy analysis of the sequence suggests Gidr to be a transmembrane protein. A second open reading frame encodes Gids (see AAB82497), a putative soluble protein. By analogy to other systems, it is thought that a His residue near the C-terminal end of Gids may be dephosphorylated when formaldehyde binds to Gidr. In the absence of formaldehyde, the phosphate on Gids may be transferred to an Asp residue of the repressor GidR (see AAB82495). These proteins are utilised in methods of the invention for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is that of the formaldehyde sensor protein

The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as untritional supplements. They may be used to increase stem cell proliferation; to regulate haematopolesis; and in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acids encoding a range of human polypeptides, useful in genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AAU29510-AAU33304 represent the amino acid sequences of novel human secreted proteins of the invention.
                                                                   Gaps

Protein #4316 encoded by probe for measuring heart cell gene expression.
                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                    Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human fetal liver -
                                                                                                                                                                                                                                                                                                                                               claim 27; SEQ ID NO 29638; 639pp + sequence listing; English.

                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                   The present invention relates to single exon nucleic acid probes for ameasuring human gene expression in a sample derived from human heart (see ABA21535-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, human standon, cardiac arritythmias and congenital heart disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                            probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimmer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention.
exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                     The present invention provides a number of single exon nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              bone marrow expressed exon; gene expression analysis; probe; rray; cancer; leukaemia; lymphoma; myeloma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human bone marrow expressed probe encoded protein SEQ ID NO: 30449.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human genome-derived single exon nucleic acid probes useful for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to human single exon nucleic acid probes (SEMP: see AAIIO08-AAIIS4659). The present sequence is a peptide encoded by one such probe. The SEMPS are derived from human HeLa cells. The SEMPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                         Peptide #4409 encoded by probe for measuring cervical gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                  The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                    The present invention relates to novel single exon nucleic acid probes (see AA10010-AA110067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a predicting, diagnosing, grading, staging, monitoring and prognesing predicting, diagnosing, grading, staging, monitoring and prognesing diseases of the human breast, particularly those diseases with polygenic aetiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative
                                                                                                                                                                                                                                                                                                                                                                                                 Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human peptide encoded by genome-derived single exon probe SEQ ID 29447.
                                                                                                                                                                                                                                 Novel single exon nucleic acid probe used to measuring gene expression

uncleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 15614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes; the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung; measuring gene expression in a sample derived from human lung mRNA, and (b) measuring the label detectably bound to each probe of the array; identifying exons in a eukaryotic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences of the array; identifying exons in a eukaryotic genome, comprising (b) detecting at least one exon from genomic sequences of the eukaryote; and (b) detecting at least one exon from genomic sequences of the eukaryote; and (b) detecting at least one exon from genomic sequences of the above mentioned microarray; assigning exons to a single exon probe, having a fragment identical to the predicted exon, the probe is included in the above and (b) measuring the expression of each of the exons in the tissues and/or cell types using hybridisation to a single exon microarrays having a probe with the exon, where a common pattern of expression of the exons in the tissues and/or cell types indicates that the exons should be assigned to a single gene; a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the probes of probes/open reading frames (ORF). The probes are used for gene expression analysis, and for identifying exons in a gene, particularly using human lung derived mRNA and for the study of lung diseases (LDD), interstitial lung disease (LDD), family and a sathmin Plots disease (LDD), family and analysis, publicas, Harmania of expression and probably and a sa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           haemosiderosis, pulmonary histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis, Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary dyskinesis, pulmonary hypertension and hyaline membrane disease. The present sequence is a peptide/protein encoded by a single exon probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Spatially-addressable \ set \ of \ single \ exon \ nucleic \ acid \ probes, \ used \ to \ measure \ gene \ expression \ in \ human \ lung \ samples \ -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a spatially-addressable set of single exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

Sequence 5, Application US/09192983A
Sequence 5, Application US/09192983A
Patent No. 6242244
GENERAL INFORMATION:
APPLICANT: Donohue, Timothy
APPLICANT: Witthuhn, Vernon
TITLE OF INVENTION: Microbial System for Formaldehyde Sensing and
TITLE OF INVENTION: Remediation
FILE REFERENCE: 960296.95505
CURRENT FAPLICATION NUMBER: US/09/192,983A
CURRENT FILING DATE: 1998-11-16
EARLIER APPLICATION NUMBER: 08/6919,953
EARLIER FILING DATE: 1997-08-29
EARLIER FILING DATE: 1996-02-28
SOFWWARE: PatentIn Ver. 2.1
SEQ ID NO 5
LENGTH: 390
TYPE: PRT
CORGANISM: Rhodobacter sphaeroides

Sequence 10, Application US/10032159A

Patent No. US20020164703A1

GENERAL INFORMATION:
APPLICANT: Pawlowski, Krzysztof
APPLICANT: Reed, John C.
APPLICANT: Godzik, Adam
TITLE OF INVENTION: ENCODING NUCLEIC ACIDS, AND METHODS OF USE
FILE REFERENCE: P-LJ 5100

CURRENT APPLICATION NUMBER: US/10/032,159A

CURRENT FILING DATE: 2001-12-19

PRIOR FILING DATE: 2001-12-21

NUMBER OF SEQ ID NOS: 37

SOFFWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 10

LENGTH: 92

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A; Description: this protein is one of the components of the prepriming protein comple le-stranded DNA for DNA polymerase reaction
A; Pathway: DNA biosynthesis
C; Superfamily: DNA replication protein dnaC
C; Keywords: DNA biosynthesis; P-loop
F;106-113/Region: nucleotide-binding motif A (P-loop) #status atypical
F;165-169/Region; nucleotide-binding motif B
C,Date: 31-Dec-1988 #sequence_revision 31-Dec-1988 #text_change 01-Mar-2002
C;Accession: A28484; S56588; B25124; C65251

J. Bacteriol. 180:2450-2458(1998).
-!- FUNCTION: Gas vesicles are small, hollow, gas filled protein structures that are found in several microbial planktonic microorganisms. They allow the positioning of the organism at the favorable depth for growth. GvpA type proteins form the essential core of the structure.
-!- SUBCELLULAR LOCATION: GAS VESICLE MEMBRANE.
-!- SIMILARITY: BELONGS TO THE GAS VESICLE PROTEIN TYPE A FAMILY.

Protochlorophyllide (Pchlide) to form chlorophyllide a (Chlide)

(By similarity). This reaction is light-independent.

-!- PATHWAY: Light-independent chlorophyll biosynthesis.

-!- PATHWAY: Light-independent chlorophyll biosynthesis.

-!- SUBUNIT: Protochlorophyllide reductase is thought to be composed of three subunits; chll., chlN and chlB. Could form a heteroteetramer of two chlB and two chlN subunits (By similarity).

C -!- SIMILARITY: BELONGS TO THE CHLB / BCHB / BCHZ FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Oxidoreductase; Photosynthesis; Chlorophyll biosynthesis; Chloroplast.
